WEEK-02

NAME: Farhan

Reg No: 240701136

Week: 02-01

Question 1

```
Correct
Marked out of 3.00
Flag question
 Many people think about their height in feet
 and inches, even in some countries that
 primarily use the metric system. Write a
```

program that reads a number of feet from the

user, followed by a number of inches. Once these values are read, your program should compute and display the equivalent number of centimeters. Hint: One foot is 12 inches. One inch is 2.54 centimeters. **Input Format**

First line, read the number of feet.

Second line, read the number of inches. **Output Format**

In one line print the height in centimeters. Note: All of the values should be displayed

using two decimal places.

Falling back to raw text area.

#include<stdio.h>

return 0;

}

by b

by b

subtracted from a

Sample Output

106 94 600 16 4

int main()

{

#include<stdio.h>

int a,b;

Question 2
Correct
Marked out of 5.00
▼ Flag question
Create a program that reads two integers, a

and b, from the user. Your program should

compute and display: • The sum of a and b •

The difference when b is subtracted from a •

The product of a and b • The quotient when a is

divided by b • The remainder when a is divided

```
Input Format
First line, read the first number.
Second line, read the second number.
Output Format
First line, print the sum of a and b
Second line, print the difference when b is
```

Fourth line, print the quotient when a is divided

Fifth line, print the remainder when a is divided

by b Sample Input 1 100 6

Third line, print the product of a and b

Answer: (penalty regime: 0 %) Ace editor not ready. Perhaps reload page? Falling back to raw text area.

```
int product=a*b;
    int quotient=a/b;
    int reminder=a%b;
    printf("%d\n",sum);
    printf("%d\n",difference);
    printf("%d\n",product);
    printf("%d\n",quotient);
    printf("%d\n",reminder);
}
```

Marked out of 7.00
№ Flag question
A bakery sells loaves of bread for \$3.49 each. Day old bread is discounted by 60 percent. Write a program that begins by reading the number of loaves of day old bread being purchased from the user. Then your program should display the regular price for the bread, the discount because it is a day old, and the total price. Each of these amounts should be displayed on its own line with an appropriate label. All of the values should be displayed using two decimal places.
Input Format

Read the number of day old loaves.

First line, print Regular price: price

Third line, print Total: total

using two decimal places.

Second line, print Discount: discount

Note: All of the values should be displayed

Output Format

Sample Input 1

Sample Output 1

10

Regular price: 34.90 Discount: 20.94 Total: 13.96 **Answer:** (penalty regime: 0 %) Ace editor not ready. Perhaps reload page? Falling back to raw text area. #include<stdio.h> int main(){ int n;

%.2f\n",r); printf("Discount: %.2f\n",d); printf("Total: %.2f\n",t); return 0;

printf("Regular price:

float r,d,t;

r=n*3.49;

d=r*0.6;

t=r-d;

}

scanf("%d",&n);

Input **Expected** Got Regular price: 34.90 10 Regular Discount: 20.94

Total: 13.96

WEEK-02-02

Marked out of 3.00 **♥** Flag question

Question 1

Correct

Goki recently had a breakup, so he wants to have some more friends in his life. Goki has N people who he can be friends with, so he decides to choose among them according to their skills set Yi(1<=i<=n). He wants atleast X skills in his friends. Help Goki find his friends.

First line contains a single integer X - denoting

the minimum skill required to be Goki's friend. Next line contains one integer Y - denoting the skill of the person

INPUT

OUTPUT Print if he can be friend with Goki. 'YES' (without quotes) if he can be friends with Goki

else 'NO' (without quotes).

CONSTRAINTS 1<=N<=1000000 1<=X,Y<=1000000

SAMPLE INPUT 1 100 110

Question 2
Correct
Marked out of 5.00
№ Flag question
Before the outbreak of corona virus to the world, a meeting happened in a room in Wuhan.
A person who attended that meeting had
COVID-19 and no one in the room knew about

it! So everyone started shaking hands with

everyone got infected! Given the fact that any

two persons shake hand exactly once, Can you

tell the total count of handshakes happened in

that meeting? Say no to shakehands. Regularly

Read an integer N, the total number of people

everyone else in the room as a gesture of

respect and after meeting unfortunately

wash your hands. Stay Safe.

Input Format

0

Question 3
Correct
Marked out of 7.00
Flag question
 In our school days, all of us have enjoyed the
 Games period. Raghav loves to play cricket and
 is Captain of his team. He always wanted to win
 all cricket matches. But only one last Games
```

period is left in school now. After that he will

pass out from school. So, this match is very

important to him. He does not want to lose it.

So he has done a lot of planning to make sure

his teams wins. He is worried about only one

opponent - Jatin, who is very good batsman.

techniques, that could be most beneficial for

dismissing Jatin. He has given points to each of

the 3 techniques. You need to tell him which is

the maximum point value, so that Raghav can

select best technique. 3 numbers are given in

input. Output the maximum of these numbers.

Three space separated integers.

Explanation Out of given numbers, 8 is

Maximum integer value
